1. Which of the following visual elements are included in a design system? Select all that apply.

0.75 / 1 point

☒ Iconography

Correct

Iconography is an example of a visual element in a design system as it is the collection of icons used in the design. Typography and elevation are also examples of visual elements in a design system.

☒ Typography

Correct

Typography is an example of a visual element in a design system as it is the style and appearance of written language. Elevation and iconography are also examples of visual elements in a design system.

☒ Wireframes

This should not be selected

Wireframes are used to create visual elements in designs; they aren't visual elements themselves. Iconography, typography, and elevation are examples of visual elements in a design system.

☒ Color

Correct

Color is an example of a visual element in a design system as it is the collection of icons used in the design. Typography and Iconography are also examples of visual elements in a design system.

2. A design team sets up a design system for an upcoming product launch. The design system includes visual styles, usage guidelines, \_\_\_\_\_, and support codes to ensure all elements in their design carry through to the final product.

1 / 1 point

graphics

branding

UI patterns

Correct

Design systems include UI patterns, which consist of elements, components, modules, and templates.

3. One benefit of a design system is that it creates consistency for designers and users. When designers have a specific set of elements to work from, they can increase the speed of production, decrease inconsistencies, and focus on innovative solutions that focus on the user.

1 / 1 point

- ☒ True  
☐ False

- ☒ Correct  
Applying a standard set of elements in a design system makes it easier for designers to create them across the project and for users to recognize them.
