

1. Which of the following is a basic component of a design system? Select all that apply.

0.75 / 1 point

☒ UI components

☒ Correct
Components such as buttons, dialogues, and gestures are interface elements. These features are consistent across a brand or product. Other basic components of a design system include guidelines and visual styles.

☒ Guidelines

☒ Correct
Guidelines specify certain components or styles should be used within a product. These help designers stay consistent across all of their work. Other basic components of a design system include visual styles and UI components.

☒ Editorial styles

☐ This should not be selected
It is important to set editorial standards for a site's content, but this is not a basic component of a design system.

☒ Visual styles

☒ Correct
Defining the styles for core visual design elements helps companies express their brand more consistently. This may include elements, like typography, color palettes, and iconography. Other basic components of a design system include guidelines and UI components.

2. A design team is creating mockups for a website, and wants these mockups to incorporate solutions for multiple pages. A teammate proposes the creation of a design system to ensure consistency. Which of the following is another benefit of a design system?

1 / 1 point

- ☐ Design systems help separate the product from the brand identity.
- ☐ Design systems allow designers to develop standards as they move through the process.
- ☐ Design systems house single-use elements.
- ☒ Design systems help designers create scalable designs and increase efficiency.

☒ Correct
Design systems help designers create scalable designs and increase efficiency, which can save designers time and money.
