Optional - Create a low-fidelity prototype in Figma

In the course videos, your instructor, Dave, has been showing you the steps to build a low-fidelity prototype using Adobe XD. If you're using Figma instead of Adobe XD, you can follow similar steps to make your designs interactive. You'll have the chance to create your own low-fidelity prototype in an upcoming activity, so take a moment to make sure that you understand how to do so.

You might remember how to create a low-fidelity prototype in Figma from an earlier course of the certificate program. If you need a refresher, check out this video about [building low-fidelity prototypes in Figma](#)  and this reading about [low-fidelity prototypes in Figma](#)  from an earlier course.
