

Learn more about problem statements

You’ve spent lots of time conducting research to empathize with the users you’re designing for. Now, you’re ready to move from the empathize phase to the define phase. During the define phase, you’ll create a **problem statement**, which is a clear description of the user's need that should be addressed.

To learn more about problem statements, review this video about [scoping design problems](#) and this reading about [defining problem statements](#) from earlier in the program.

Remember, you can create a problem statement using this template:

PROBLEM STATEMENT

Click to add text

is a/an
