

# Share your low-fidelity prototype

Create a link to your digital low-fidelity prototype in Figma, and share it with your classmates on the discussion board.

Here's how to create a prototype link in Figma:

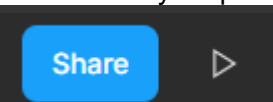

Step 1: Open your project in Figma

After opening the Figma website or starting the Figma desktop app, find your project under Recent. Click on the project to open it.

Step 2: View your prototype

Click the **Present** ► button in the upper right-hand corner to enter Presentation view. This allows you to view and interact with your prototype as another person would.

Step 3: Generate a link for your prototype

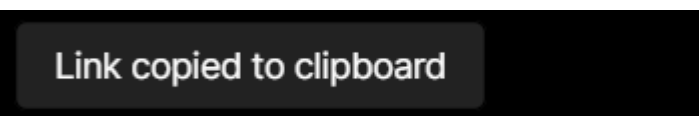

While in the Presentation view in Figma, click the **Share prototype** button in the upper right corner.

Click **Copy link** in the bottom-left corner of the share modal.

[Copy link](#) [Get embed code](#)

Figma will copy the link to your prototype to your clipboard.

Once you have your Figma prototype link copied to your clipboard, post that link on this discussion board.

After you've posted your prototype link, respond to at least two other classmates' work. Each of your responses should include at least three sentences (around 150–200 words). Address these questions in your responses:  
What did you like most?

Were there any steps that confused you?

What suggestions or recommendations would you provide?
