

1. Imagine that you finish this program, and compile a concise and engaging case study about your responsive website to add to your portfolio. The case study includes the project goals and objectives, your role, the insights you gained through research, and what you learned from the project. What's missing from this case study? Select all that apply. 0.75 / 1 point

☒ Challenges and constraints

☒ Correct
Challenges and constraints are critical components of the case study. Case studies should offer a concise, engaging, and detailed summary of the project. It should also include the outcome of the project, and information on the design process and artifacts.

☒ Outcome of the project

☒ Correct
A description of the project outcome is a critical component of the case study. Case studies should offer a concise, engaging, and detailed summary of the project. It should also include challenges and constraints you faced, and the design process and artifacts.

☒ Design process and artifacts

☒ Correct
Design process and artifacts are critical components of the case study. Case studies should offer a concise, engaging, and detailed summary of the project.

☒ Feedback on the project

☐ This should not be selected
Feedback may come into play when you describe your lessons learned, but feedback as such does not belong in the case study. Case studies should offer a concise, engaging, and detailed summary of the project. It should also include the outcome of the projects, challenges and constraints you faced, and the design process and artifacts.

2. When developing a case study, what artifacts should you include from a project? Select all that apply. 0.75 / 1 point

☒ Prototypes

☒ Correct
You should include prototypes in a case study to demonstrate your design process over the course of the project.

☒ Final designs

☒ Correct
You should present relevant artifacts produced throughout the project to demonstrate how well you used the design process to solve a user's problem. This includes final designs.

☒ Wireframes

☒ Correct
You should include wireframes in a case study to demonstrate your progression through the project.

☒ Design sketches from previous projects

☐ This should not be selected
In a case study, you should present relevant artifacts produced over the course of the project you are featuring, not sketches from a previous project. Relevant artifacts include the featured project's sketches, wireframes, prototypes, and final designs.
