Refine wireframes

Week 3 review

Activity Exemplar: Create digital wireframes for additional screen sizes

Exemplar

Here is a completed exemplar of a responsive mobile wireframe for the homepage of a clothing store called Tee's Shirts. Included are the digital desktop version of our wireframe, the paper wireframe the digital wireframe was based on, and a new digital version that is adapted for a mobile device.

The desktop example will help you to compare the difference between the desktop and mobile version to understand how the design was scaled to a smaller screen size. The example also includes the mobile paper wireframe to demonstrate the transition from a paper drawing to a fully digital wireframe.

The desktop wireframe is the same example we used in the previous activity on

[creating digital wireframes for desktop screen sizes in Adobe XD](#).

This exemplar is a completed version of the activity you did earlier in the exercise. Use this exemplar to compare your own work with an example that meets all the criteria. There's also an explanation of how the example fulfills the expectations for the activity that was outlined.

Download or view each of the pages as a PDF using the link below:

Assessment of exemplar

Here's how we completed the additional screen size homepage wireframes for Tee's Shirts.

Step 1: Creating an artboard representing an iPhone 11 Pro that was sized to 375px by 812px to start.

Step 2: We referenced the paper wireframe mapped on grid paper to examine how best to arrange the elements in our design. The paper drawing represents an extended version of a mobile home screen that extends past 812px.

Step 3: We added the elements from our desktop wireframe to our mobile wireframe by removing elements that wouldn't translate to mobile, resizing the ones that would, and changing the layout of the page to work on a narrower screen. We used our mobile paper wireframe as a template for where to place things, and how to resize or change them.

We resized:

- The hero image
- The headline text
- The body text

We changed:

- The layout of the 3 images below
- Added a hamburger menu
- Changed the top menu display

Step 4: Checking our work against the paper version of our design to make sure we translated everything appropriately and didn't miss any steps.

Now compare your homepage variation to the matching exemplar above.

As you compare, ask yourself:

- Did you create your additional screen size variation based on your paper wireframes?
- Did you use an artboard from the list of device sizes?
- Did you reuse and modify the elements from your desktop design?
- Did you create a version of your homepage for an additional screen size?

What did you do well? Where can you improve? Take this feedback with you as you continue to progress through the course.

Mark as completed
