# Activity Exemplar: Create digital wireframes for a mobile app

⭐ Exemplar

Here is a completed exemplar along with an explanation of how the exemplar fulfills the expectations for the previous activity:

You can also open the PDF below to review these wireframes in detail.

🔍 Assessment of exemplar

Assess what you've done using each of the criteria to evaluate the exemplar.

- These wireframes are easy to understand, and should convey what is meant to happen on each screen to the user.

- They demonstrate the design's hierarchy of information, bringing the essential information a user will need on each screen to the forefront.

- These screens highlight the basics of the main user flow — reviewing food items a user has that are close to expiring, choosing a recipe, and adding used items to a shopping list.

Now compare the exemplar wireframes shown above to your own wireframes. What do you do well? Where can you improve? Take this feedback with you as you continue to progress through the course.

Mark as completed
