Share how you iterated on designs based on research insights

So far, you've reviewed how research can inform the design process. You tested your prototype, turned observations into insights, and translated your findings into actionable design updates. Now, consider what you've learned from testing your prototype. Reflect on the following questions to generate ideas for the discussion:

What design iterations did you make based upon research insights from your usability study?

Did you have to make any significant changes? Why or why not?

What were the recurring themes in your feedback you addressed?
