1. Which of the following examples represent the best use of the app bar title on a desktop?   0 / 1 point

○

○

◉

⊗ Incorrect
Avoid wrapping text if there is space for the full title to appear in a single line. The best way to present the title is in the fourth example below, which uses the prominent top app bar and text wrapping.

2. What pages in a public design system can new designers access for additional information and download baseline design kits for Figma and Adobe XD?   0.75 / 1 point

☑ Develop

⊗ This should not be selected
A Develop page is mainly for developers to get ideas for code options. It is not necessary for a designer to access. Designers can access the Resources, Components, and Design pages on public design systems for additional information and baseline design kits.

☑ Components

✓ Correct
Designers can access the Resources, Components, and Design pages on public design systems for additional information and baseline design kits. A Components page offers downloadable building blocks for designers to use as they start building their designs. It also includes guidance on how to use them effectively in their designs.

☑ Resources

✓ Correct
Designers can access the Resources, Components, and Design pages on public design systems for additional information and baseline design kits. A Resources page offers valuable information for new designers as well as access to downloadable icons and components.

☑ Design

✓ Correct
Designers can access the Resources, Components, and Design pages on public design systems for additional information and baseline design kits. A Design page offers foundational guidance on how to use color, navigation, and other elements.

3. How does a robust design system support a designer's day-to-day work?   0 / 1 point

○ Design systems provide a strict guideline that never changes

○ Design systems create consistent guidelines for colors and images that help with brand recognition.

○ Design systems are only useful to experienced designers, not to people new to the field.

⊙ Designs systems are scalable as an organization grows.

⊗ Incorrect
Design systems are considered living documents that grow and change. Though helpful to the organization, this does not benefit a designer creatively in their day-to-day work. Instead, design systems create consistent outlines for colors and images that support designers in their day-to-day work.
