Check a low-fidelity prototype in Adobe XD

You should now have a fully-functional low-fidelity prototype for your responsive website. How exciting! In the next part of the course, you'll share this prototype with real users and get feedback through a usability study.

But before you share your designs with the world, use this quick checklist to make sure that your prototype is ready to test:

1. Does the prototype connect at least four pages?

2. Are pages of the prototype connected in the order of the main user flow?

3. Can users navigate forward and backward through pages of the main user flow?

4. Are there any dead ends that you need to address?

5. Can users easily navigate back to the home page from any screen of the design?

6. Do the designs contain cues that orient users about where they are in the flow, like a progress bar?

7. When users reach the final page of the prototype, is there a completion message or are they navigated back to the home page?

If you answered **yes** to all these questions, you're officially ready to share your low-fidelity prototype!

To learn how to share your prototype with others, check out
Get Started with Adobe XD: Collaboration ↗ for a quick tutorial with practice files. When you're ready, continue on to the next part of the course, where you'll plan and conduct a usability study to gather feedback about your designs.
